

A topographic map showing contour lines and elevation. The text "San Luis Obispo GIS Users Group" is overlaid in a large, white, bold, sans-serif font with a slight shadow effect. The map background is green and brown, with contour lines in brown and blue lines representing water features. A red vertical line and a red horizontal line intersect on the map.

Data Sources  
by: Joe Larson

# LANDFIRE

LANDFIRE data products include layers of vegetation composition and structure, surface and canopy fuel characteristics, and historical fire regimes.

## LANDFIRE

The *National Map* LANDFIRE provides a dynamic online map interface that can be used to view USGS data

[Open with Full Map Extents](#) [Trouble Downloading?](#) [View User Instructions](#)

View and download data through National Map style interface, or...

# LANDFIRE Data Access Tool

The LANDFIRE Data Access Tool is an ArcGIS toolbar developed by the Rocky Mountain Research Station and distributed by the National Interagency Fuels Technology Team.

The tool allows users to interact with the LANDFIRE data distribution site (*The National Map LANDFIRE*) and download LANDFIRE data directly from ArcMap.

Additionally, four raster functions are included with the tool:

**Reproject Raster** with options to specify resampling methods, output extent, and nodata values.

**Build LCP** creates a FARSITE landscape (LCP) file from a set of input rasters.

**LCP to ArcGrids** disassembles a FARSITE LCP file back to the original input layers in ArcGrid format.

**Attach DBF to ArcGrid VAT** joins the .dbf file created with the Smart Assembler to the attribute table in a corresponding GRID.

FRAP

Fire and Resource Assessment  
Program

The California Department of Forestry and Fire Protection's Fire and Resource Assessment Program (FRAP) provides a variety of products including the Forest and Range Assessment, a detailed report on California's forests and rangelands. FRAP provides extensive technical and public information for statewide fire threat, fire hazard, watersheds, socio-economic conditions, environmental indicators, and forest-related climate change. Much of this information involves Geographic Information System (GIS) analysis, tables, maps, data and calculation tools that are available on this website.

Types of data available: Hydro Units, Topo images, Quad indexes, Elevation data, Ortho imagery, Geographic Names, Land Use / Land Cover, Soils, Climate.

# National Digital Forecast Database (NDFD) from the National Weather Service

As the foundation of the NWS Digital Services Program, the National Digital Forecast Database (NDFD) consists of gridded forecasts of sensible weather elements (e.g., cloud cover, maximum temperature). NDFD contains a seamless mosaic of digital forecasts from NWS field offices

Download gridded weather data via: 'tkdegrib' client or Web Services to various GIS softwares or Google Earth network link.

# OpenStreetMap

OpenStreetMap creates and provides free geographic data such as street maps to anyone who wants them. The project was started because most maps you think of as free actually have legal or technical restrictions on their use, holding back people from using them in creative, productive, or unexpected ways.

Map is fully editable, downloadable and convertible  
**FOR ANYONE!**

# Cloudmade

CloudMade makes extensive use of OpenStreetMap data to provide mapping services.

**CLOUDMADE** Makes  
Maps Differently

Cloudmade packages OSM data  
for subsets of Continents,  
Countries and States...in various  
formats – shapefile, for GPS units,  
etc.

# Downloads

Welcome to the CloudMade downloads site. This is where you can find extracts of maps from different places around the world. From here you can download:

- [OSM XML extracts by country](#)
- [Garmin Map Files \(OSM.err edition\)](#)
- [Osmosis country bounding polygon](#)
- [Shapefile extracts by country](#)
- [Navit maps by country](#)
- [GPX POI by country](#)
- [TomTom POI by country](#)
- [OSM XML feature extracts by country](#)

The files provided on these pages are created from OpenStreetMap map data. Because OpenStreetMap is a work in progress many of the countries are only partially mapped or are incomplete. The data contained on these pages has not been checked or verified by CloudMade and we don't recommend using it for any mission critical applications. For more information please read the [terms and conditions](#).

Everything on this site is free of charge, so enjoy! If you do something cool with any of the data here, [let us know](#).

For more information about the files contained on this page, take a look at our [FAQ](#).
